

TRI-CONSTRUCTION

Meeting Your Construction Needs

ASBESTOS / LEAD POLICY

TRI Employees are not allowed to work with any unmonitored exposure to asbestos and or lead.

Work can be performed in areas where airborne concentrations of asbestos and lead are less than the permissible exposure limits (PELS) as determined by test results by an approved testing lab.

If at any time there is a question concerning asbestos or lead in the workplace, employees are instructed to cease work in the area and contact their immediate Foreman, who will then contact our Field Superintendent, who will then request additional testing on site to verify if we are in compliance with OSHA regulation.
